

Ekki Syam Sugiardi

Senior Software Engineer in QA / SDET

Bogor, Indonesia | +62-8131-241-6950 | ekkisyam2310@gmail.com | [Linkedin](#) | [Personal Website](#)

SUMMARY

Senior SDET / QA Automation Engineer experienced in designing test automation frameworks, developer tooling, and testing infrastructure across multiple product domains and Southeast Asian markets. Built shared QA systems adopted across 35 repositories and tooling used by 20 QA engineers. Experienced in web, API, integration, mobile, and AI system testing, with a focus on scalable automation architecture and improving engineering feedback loops.

CORE SKILLS

Languages: Python, Java, Go, TypeScript, JavaScript

Test Automation: Playwright, pytest, pytest-bdd, Selenium, Appium, Cucumber

API & Service Testing: REST, GraphQL, Rest Assured, Karate DSL, Postman

AI & LLM Testing: DeepEval, LLM output evaluation, intent classification evaluation, AI-assisted test generation

CI/CD & Test Infrastructure: GitHub Actions, Bamboo CI, Docker, Podman, Allure, pytest-html

PROFESSIONAL EXPERIENCE

Ninja Van - Jakarta, Indonesia

Senior Software Engineer, QA 1 | September 2024 – Present

- Designed and shipped a TypeScript VS Code/Cursor test explorer for Gherkin test discovery, execution, debugging, step diagnostics, test reporting, Playwright traces, and internal test-case traceability; adopted by 20 QA engineers.
- Developed a cross-platform Go secrets-management utility with Python integration, runtime decryption, CLI tooling, and pre-commit encryption, enabling secure CI execution across 35 QA repositories.
- Built a Python, pytest-bdd, and Playwright automation framework that became the reference architecture for new QA projects, then led migration from the existing Java, Cucumber, and Selenium stack.
- Extended the framework with DeepEval-based evaluation for non-deterministic AI features, covering intent classification, tone, toxicity, and response correctness.
- Supported automation and feature validation for a migration from Salesforce to an internal CRM, contributing to more than \$60,000 in monthly subscription savings.
- Owned API and webhook automation for integrations with TikTok, Lazada, Shopee, Amazon, and other e-commerce platforms across order, delivery, and recovery workflows in 6 countries.

Software Engineer, QA | January 2022 – August 2024

- Co-developed the company's first Go integration-testing framework for Java and Go microservices, giving teams earlier feedback on service-level defects.
- Built web, API, and mobile automation for logistics recovery workflows using Selenium, Karate DSL, Appium, and Cucumber BDD.
- Owned 14 shared Java automation packages used across 3 product verticals and 9 QA teams, reducing duplicated framework implementation across projects.
- Drove an in-sprint automation initiative that reduced manual testing effort by 70% and removed recurring sprint-long testing delays.

Backend Engineer Intern | September 2021 – December 2021

- Developed a QA environment data-cleanup service and secure REST APIs.

EDUCATION

College of Information and Computer Management LPKIA - Bandung, Indonesia

Bachelor's Degree in Informatics Engineering | GPA: 3.88/4.0
